## By Austin Sargent

A major objective of the Occupational Employment Statistics (OES) survey is to establish the hourly "base wage" rate for an occupation. The hourly base wage rate measures how much a worker can expect to earn in that job. Since it is a base rate it excludes overtime pay, because these earnings would inflate the rate. The value of benefits is also excluded. However, it does count tip and commission wages.

The data collected from employers provides hourly base wages for the vast

majority of occupations. However, there are some jobs where workers typically work other than "year-round, full-time." Most notable among these non-traditional hour occupations are teachers and administrators of public education. Other jobs for which hourly wage rates are not available include actors, entertainers, airline pilots and flight attendants. For these occupations, with "odd hours", the survey only collects annual wage data. Presented in the table below are annual wages for occupations with non-traditional hours for which publishable data is available.
